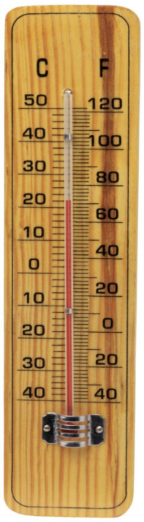
WHEN WILL THE WEATHER BE RIGHT FOR PAVING?



When the air temperature reaches 70 degrees and the surface temperature on I-10 asphalt reaches 85 degrees, ADOT will be talking about paving again.

Current breezy days in the 70s allow pavement to dry too quickly, causing problems with the paving process. ADOT will be watching the weather forecast to determine the start of final paving on I-10 between Tucson and Benson.

The paving operations, which are scheduled to begin on eastbound I-10 in Cochise County, will require lane closures up to five miles long and significant delays can be expected during peak traffic times.

The final paving of approximately 17 miles of I-10 in both directions between State Route 83 and State Route 90 is expected to take five weeks to complete once it gets started. Once it begins, paving will be done weekdays during daylight hours.
